

EDA Report: Student Mental Health Analysis

This report analyzes the Student Mental Health dataset. It explores mental health conditions such as depression, anxiety, and panic attacks and studies their relationship with academic performance and treatment-seeking behavior. The analysis includes descriptive statistics, visualizations, and correlation analysis.

1. Mental Health Conditions

2. Gender Distribution

3. Correlation Heatmap

The findings reveal significant levels of depression, anxiety, and panic attacks among students. However, only a small percentage seek professional help. Gender distribution is imbalanced, which may influence results. Correlation analysis shows strong relationships between mental health conditions but weak association with academic performance.
